DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-40 are rejected under 35 U.S.C. 102(e) as being anticipated by Cam Winget et al (Cam Winget), U.S. Patent Pub. No. 2005/0141498.

Regarding claims 1-40, Cam Winget discloses a network infrastructure validation of network management frames which uses the IEEE 802.11 protocol. Cam Winget further discloses management frames utilized in wireless communications (wherein the wireless communications are processed via access points/wireless devices (see abstract, 0029, figures 1 and 6) associated with an apparatus and said management frames being protection capable or non-protection capable and wherein said management frames indicate whether or not they are protection capable (0019).

Cam Winget discloses wherein at the least one of the management frames is an action frame (0022), which is comprised of RSN capabilities (0036).

Cam Winget further discloses the use of the IEEE 802.11 protocol for applying protection to the frames.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Meier et al, U.S. Patent Pub. No. 2004/0103282, discloses 802.11 using a compressed reassociation exchange to facilitate fast handoff.
